

UPSKILL TECHNOLOGIES-MS ACCESS EXERCISES

WWW.UPSKILLTECHNOLOGIES.COM

Exercise # : 102C
Level : MS Access Intermediate
Objective : To test access query skills on single table
Compatibility : Access 2007 or >

Instructions:

Download the excel file associated with the test. The sheet "Database" has a table. Create a new Access Database and create a new table with the data from excel. Name the table as "Real". Make sure you have imported all 125 records with 10 fields. Also check the datatype for each field.

Design a query in Access for the below requirements and save the result of each query in the excel file in the designated sheets. Also paste the SQL code in the yellow box provided in each sheet. Make sure to refer the practice database before attempting this assignment.

1. Write a Query to get the records for all the properties in West Area.
2. Write a Query to get the records for all the properties which are > than 6 million.
3. Write a Query to get the records sorted by date to show the newer ones on the top
4. Write a Query to get a report showing the total price by each Website.
5. Write a Query to get the records for all the properties which are either below <4 million or has "Lift" in the amenities
6. Write a Query to get a report to show month wise total of price
7. Write a Query to get a report to show all properties with all the fields also a calculated field to show Price/Square feet. Format the column to number with zero decimals. Name the column as "PricePerSqFeet".
8. Write a Query to get a report to show all records for independent house in west area with lift
9. Create a parameter query to show all the records for the parameter website
10. Write a Query to get a report to show all properties between 3 to 6 million, in West Area with at least 2 bedrooms.

Save the final workbook with your name and the exercise # and send it for evaluation to info@upskilltechnologies.com. Please reach out to us on phone or email if you have any difficulty doing or understanding the assignment.
